Experience

AIG NUSA HUB Bogor, Indonesia

Tech Lead | January 2026 – Present

- Spearheaded a greenfield offline-first POS platform from zero to MVP, selecting the tech stack, defining architecture, establishing engineering workflows, and leading a newly formed team through delivery.
- Architected offline-first frontend with Next.js using Service Workers for background sync and IndexedDB for local persistence, enabling seamless operation without connectivity.
- Built backend API with Go Fiber and GORM, with Swagger for API documentation, serving as the sync target for offline-queued transactions.
- Implemented CI/CD pipelines using GitHub Actions and containerized multi-service deployments with Docker Compose on VPS infrastructure.
- Established end-to-end testing with Playwright and unit testing with Jest/Vitest, improving code reliability and reducing regression risks.
- Adopted AI-assisted development workflow using OpenAI Codex and Claude Code to plan architecture, guide implementation, and write tests, accelerating feature delivery while maintaining code quality.

BULLION ECOSYSTEM INTERNATIONAL Bogor, Indonesia

Backend Developer | January 2023 – January 2026

- Refactored gold exchange settlement engine (Go, Express, MongoDB) into modular builder-execution pattern, improving readability, testability, and extensibility.
- Built Redis ZSet-based transaction queue (Go, Redis) to replace GCP Cloud Tasks, eliminating out-of-order settlement issues.
- Designed ledger-based IDR/USD balance synchronization mechanism (MongoDB, Decimal handling) preventing transaction failures.
- Reduced API latency by 91% and infrastructure cost by 17% through MongoDB query optimization and indexing improvements.
- Implemented distributed locking (Redis), feature flags (Flagr), and structured logging with trace context propagation (OpenTelemetry, GCP).
- Architected event ticketing system with separated buyer (Go Fiber) and organizer (NestJS) services, integrating MongoDB, Redis, and AWS Rekognition for face recognition check-in.

GREATDAY HR Tangerang Selatan, Indonesia

Backend Developer | January 2022 – January 2023

- Developed Payroll, Claim, and Severance modules for multi-country HRIS platform.
- Implemented income tax form generation based on Indonesian tax regulations.
- Maintained and improved backend services using NestJS, TypeORM, and SQL.

CENTER FOR INTERNATIONAL FORESTRY RESEARCH Bogor, Indonesia

Machine Learning Researcher Consultant | June 2021 – September 2021

- Built classification models using PyTorch and scikit-learn for monitoring online songbird marketplaces.
- Developed Django-based web labeling tool with PostgreSQL.

Education

IPB UNIVERSITY Bogor, Indonesia

Master's Degree, Computer Science. GPA 3.76 | September 2019 – September 2021

Thesis: Designed and analyzed control systems for a wheeled robot, comparing SOM and SVR methods.

IPB UNIVERSITY Bogor, Indonesia

Bachelor's Degree, Computer Science. GPA 3.45 | September 2015 – September 2019

Thesis: Developed a control system for a wheeled robot using Self-Organizing Map (SOM) for adaptive behavior.

Tools & Technologies

Languages: Go (Fiber), Node.js
(Javascript/TypeScript, Express, NestJS, Next.js), Python

Database: MySQL, PostgreSQL, MongoDB,
Redis, IndexedDB, GORM, TypeORM, Mongoose

Testing: Playwright (E2E), Jest, Vitest

CI/CD & Infra: GitHub Actions, GitLab CI,
Docker, Docker Compose, Nginx, Let's Encrypt

Cloud: GCP (Cloud Tasks, Pub/Sub, Cloud Trace,
Cloud Storage, Cloud Logging), AWS
(Rekognition, S3)

Other: Service Workers, OpenTelemetry,
Swagger, OpenAI Codex, Claude Code
